PROFESSIONAL SUMMARY

Passionate Full Stack Developer with hands-on experience in building responsive and scalable web applications using MERN stack and modern technologies. Skilled in Java, JavaScript, ReactJS, and problem-solving with strong leadership and management abilities. Focused on creating efficient, user-friendly solutions and continuously improving through real-world projects and learning.

EDUCATION

Galgotias College Of Engineering & Technology

2023-2027

Saraswati Vidya Mandir Rambagh Basti

10th- Score: 81%

12th- Score: 83.6%

PROJECTS

Smart Resume Analyzer & Job Matcher

React, Nodejs, Express, MongoDB, Gemini, Tailwind CSS

- Developed a smart system that analyzes resumes and job descriptions to extract key skills, identify gaps, and generate targeted interview preparation including technical and behavioral questions.
- The system processes uploaded resumes and job descriptions, identifies relevant skills using Google Gemini, and creates a structured preparation plan tailored to a specific job role.

Banking Management System (Backend)

Nodejs, Express, MongoDB, Nodemailer

- Built a backend system simulating real-world banking operations using a double-entry ledger model.
- Ensured every transaction records both debit and credit entries for consistency.
- Implemented account management, fund transfers, and transaction processing with focus on data integrity and concurrency.
- Integrated email notifications for transactions and system alerts.

EMPLOYEE MANAGEMENT SYSTEM

React, TailwindCSS, Local-Storage

- The Employee Management System is a frontend-based web application designed to manage employee records efficiently using the browser's LocalStorage for data persistence. The system includes a dedicated Admin Panel that provides full control over employee data and system operations.
- The application allows administrators to perform complete CRUD operations (Create, Read, Update, Delete) on employee records. Each employee entry includes details such as name, email, role, salary, and a unique ID. The data is stored locally in the browser, ensuring persistence even after page refresh without requiring a backend server.

SKILLS

- Languages: Java, C, Python
- Frameworks/Libraries: React.js, Node.js, Express.js, Tailwind CSS
- Databases/Cloud: MongoDB, MySQL
- Tools: Git, Github, Postman,
- Concepts: Data Structures & Algorithms (DSA), OOPs, DBMS, OS, CN, GSAP

Achievements and Certifications

- Achievement 1: Solved more than 500 problems on Online Coding Platforms (e.g., LeetCode/GFG).
- Achievement 2: Actively participated in multiple bootcamps focused on Graph Algorithms and Dynamic Programming, improving efficiency in solving complex algorithmic problems.
- Achievement 3: I have successfully completed the Decode DSA course. Grateful for the learning experience and excited to apply these problem-solving skills further.
